

Amendments to the Specification:

1. Please replace the fifth sentence in paragraph 0032 of the specification with the following:

The propylene of the present invention is preferably a copolymer of propylene and ethylene, the ethylene content ranging from 0 to about 10% by weight of the copolymer, more preferably in an amount ranging from about 2% to about 6% by weight.

2. Please replace paragraph 0040, including Table A, of the specification with the paragraph and table below:

[0040] Example 1 is a film containing five layers, as represented by the construction A/B/C/D/E with corresponding percentage thicknesses of 10/15/45/10/20 of the total thickness of the film. The polymers in the film as described in the table below are available from the Dow Chemical Company (hereinafter ("Dow")) in Houston, Texas, except as indicated below. The tradename of each polymer is listed in parenthesis next to its description. The film was formed from the following components:

Table A

Layer	Composition	% of Layer by Wt.
A	Ethylene copolymerized with a C ₈ α-olefin, with a density of 0.900 g/cm ³ and a melt index of 5.0g/10 min. (ULDPE) (61520.09L)	85%
	Ethylene copolymerized with a C ₈ α-olefin, with a density of 0.875 g/cm ³ and a melt index of 3.0g/10 min. (Plastomer) (KC8852)	15%
B,C,D	Ethylene copolymerized with a C ₈ α-olefin, with a density of 0.917 g/cm ³ and a melt index of 4.0g/10 min. (LLDPE) (Elite 5230)	97%
	Ethylene homopolymer with a C ₈ α-olefin, with a density of g/cm ³ and a melt index of 0.2g/10 min. (LDPE) (LDPE132i)	3%
E	Random copolymer polypropylene with a density of 0.905 g/cm ³ and a melt flow rate of 10.0g/10 min. (13S10A) (available from Huntsman Chemical)	100%

3. Please replace the second to last sentence in paragraph 0044 of the specification with the following:

In addition, Examples 3-9 each include a skin layer made of a polypropylene resin that is designated Dow DS6D82 instead of the Huntsman 13S10A that is identified in Example 1.
